Art Unit 1713

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) The invention was described in (1) an application for patent, published under Section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit 1713

Claims 1-19 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Cabreck et al., U.S. Patent 6,447,920.

Reference to Cabreck et al. specifically teaches lenses, and preferably contact lenses, which are made using monomers which are macromonomers of the same structure as required by applicants' claims. This can be seen in column 3 of the reference. The use of these monomers for hydrophilic surface purposes renders either anticipated or at least prima facie obvious the polymerization of these monomers incorporated into the body of the lens as well as on the surface thereof. Applicants' claimed biomedical device, and more specifically ophthalmic lenses are either anticipated or rendered prima facie obvious from teaching of the reference to Cabreck et al.
